

Automate HVAC & Lighting to Match Building Occupancy

Coordinate event schedules with BAS controls

- Integrate upcoming event schedules with your Building Automation System to trigger the HVAC system and lights to turn on before the event and turn off when the event is over.
- Set ongoing schedules for holiday breaks and other times of building vacancy to lower your total utility usage.

Customers integrating their BAS system with FMX save an average of **\$66,000** annually in total costs.

Integrate your operations into one facility management system.

Maintenance

- Dispatch maintenance automatically after a BAS alarm
- Manage preventive maintenance to ensure efficiency
- Monitor asset conditions to inform optimum replacement

Event Scheduling

- Automate event forms and scheduling
- Manage rental payments and report on total revenue
- Measure peak occupancy and event duration metrics

Utility Tracking

- Detect anomalies in utility usage
- Set benchmarks against industry standards
- Measure ROI on implemented energy initiatives
